

HORTICRAFT UV STABILISED FROST CLOTH

Covers & Crop Protection Solutions

#FCUV

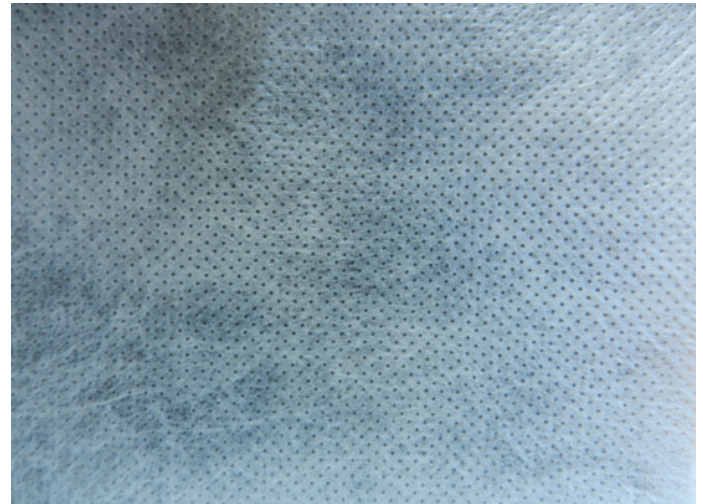

Hortcraft Frost Cloth is a lightweight premium grade UV stabilised spun-bond fabric with excellent ventilation properties, water permeability, and UV resistance. It is formulated specifically for horticultural uses from spun-bonded 25gsm to 50gsm polyester fabric.

Durability

Polyester resists deterioration due to its inherent UV resistance, far advanced compared to UV stabilised additives in polypropylene. It is resistant to weather and most chemicals. This means Hortcraft Frost Cloth has an exceptional life span, with additional UV stabilisation when compared to other fabric types such as polypropylene.

Key Benefits & Features

- Longer lasting – made from high UV resistant premium spun bonded polyester
- Polyester inherently resists deterioration from UV's, plus Hortcraft Frost Cloth has the benefit of additional UV stabilisers
- Excellent insulating and thermal properties for better frost protection
- High water and air permeability; reducing mildew and fungal diseases
- As a throw over cover – it has high light transmissions, acts as an insect deterrent, allows for overhead watering, provides adequate ventilation and can rest on plants and foliage without causing damage
- 50gsm Black Hortcraft spun-bonded cloth gives excellent weed control and mulching; effective when used directly on the ground, whilst still allowing full water penetration

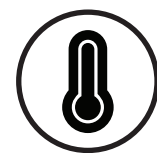

Specifications

- 25gsm, available in 3.2m wide lengths, 85% water permeability, 220*cm/cm²/second air permeability, approximately 75% shade factor. Typical application is used for frost control, weed control, light mulching cover & light weight shade
- 50gsm, available in 1.8m and 3.2m lengths, 70% water permeability, 130*cm/cm²/second air permeability, approximately 90% shade factor. Typical application is used for weed control, light mulching covers, frost cloth, insect control, light weight shade & thermal control

*Variations may apply depending on material and manufacturer
