

HORTICRAFT: HAILCRAFT HAILNET CANOPY & STRUCTURAL HAIL PROTECTION

Covers & Crop Protection Solutions

#HN-293086

Hailcraft Hailnet is a white fabric designed to go on a permanent structure as a protective covering and provide a risk reduction solution against hail stones. Hailcraft Hailnet can also provide a calm under-canopy environment; reducing losses due to fruit wind rub, and helps contain spray drift. In addition, the shade factor of the cloth reduces the incidence of fruit being burnt.

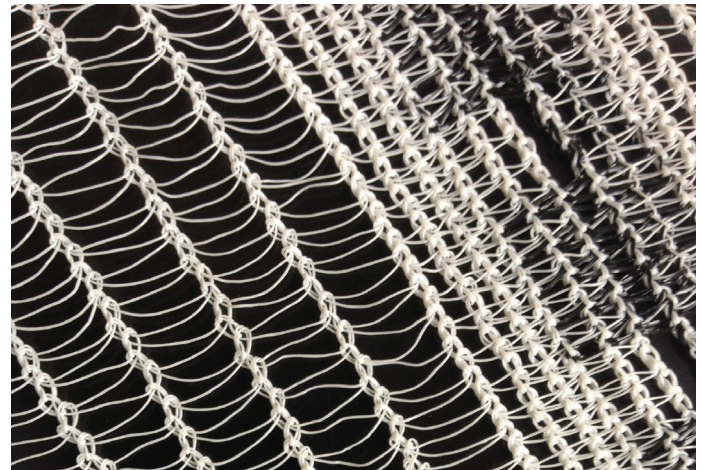

Key Features & Benefits

- Made from strong HDPE yarn that won't rot or absorb moisture
- Reinforced selvedge with eyelets and reinforced centre bands for secure installation
- A pro-rata UV warranty period of up to 10-years
- 100% recyclable
- 100% lead and phthalate-free

Usage

Hailcraft Hailnet should be used in conjunction with suitably engineered canopy structures, taking into account wind loads and weight loading under hailstorm conditions. The fabric is **not** flameproof. Can be used on structure canopies and sides. Contact with chemicals and/or pesticides that contain sulphur, halogens or highly-acidic substances may reduce the service life of the bird net and may void the warranty*.

*Condition report to be carried out by authorised Hortitech Enterprises representative, unless expressly permitted by Hortitech Enterprises.

Material

Yarn	UV Stabilised HDPE
Construction	Monofilament
Pattern	Lock Stitch Knitted
Temperature Range	-30°C to +/- 75°C

Properties

Nominal Fabric Mass (weight)	75gsm +/- 25gsm
------------------------------	-----------------

COLOUR	MRE CODE	NOM. WIDTH	LENGTH	AVERAGE % TRANSMISSION	SHADE FACTOR	AVERAGE PAR TRANSMISSION	UVR% BLOCK OUT	POROSITY
White	HN-293086	6.5m	200m roll*	90%	10%	93%	21%	~81%
		10m						

*Roll folded to 3.25m for ease of handling
Approximate roll weight 114kg
Approximate roll diameter 0.6m
Core diameter 75mm

According to AS4174:
Average % Transmission = average % transmission within 290-770nm spectrum
Average % PAR = average transmission within 408-70nm spectrum
