

HORTICRAFT QUARANTINE WOVEN MESH

Covers & Crop Protection Solutions

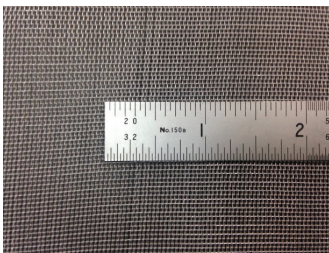

#OPNT-36

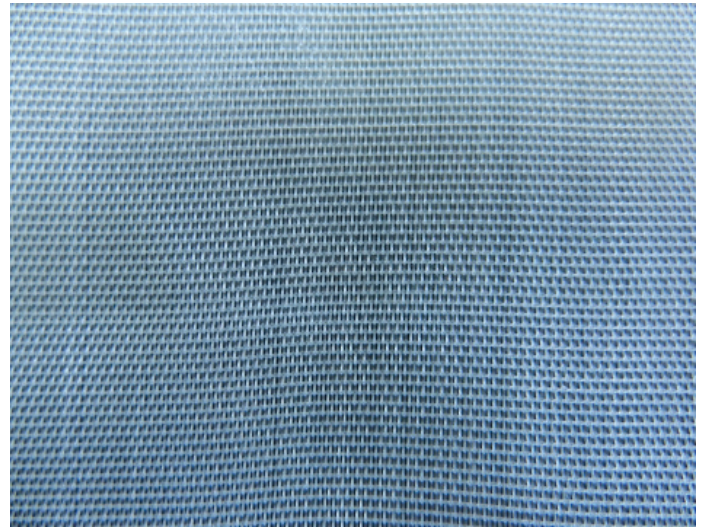

Hortcraft Quarantine Mesh integrates two methods for the control of Greenhouse pests such as thrip, aphids, leaf miner and many other insects. The dual protection begins with the mesh creating an optical deterrent that blinds and repels the insects before they reach the mesh covered area, with the fine mesh size significantly reducing the number of pests entering the structure, whilst still maintaining adequate airflow. This net has the ability for growers to yield better quality crops, flowers or foliage; lessening the need for spraying harsh chemicals and pesticides. This net can be used in all stable structures for vegetables, herbs and flowers.

Typical weft 50 mesh & typical warp 25 mesh

Typical Selvedge

Product Details

Material	Clear Monofilament HDPE
UV Guarantee	5 years
Weight	130gsm/m ²
Mesh (hole) Size	0.26mm (weft) x 0.78mm (warp)
Yarn Diameter	0.22-0.24mm
Shade	21-29% (+/-5%)
Light Transmission	65-68% (+/-10%)
Air Transmission	45-50% (+/-10%)
Ball Burst Strength	18kg/cm ² (+/-5%)
Material Width	3.57m (+/-1%)
